

Collect Data With Ease

We Make It Possible!

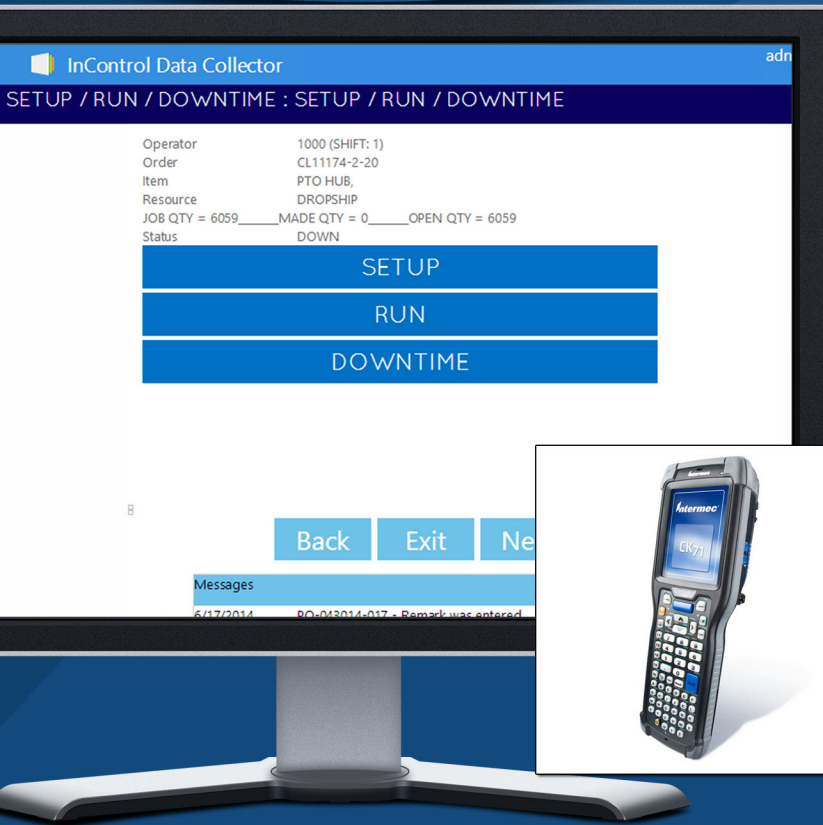

We leverage the power of Windows 6.5 mobile enabled scanners to collect data at the source. With a configurable system you can create custom workflows to capture data in the best way possible based on your company's needs. Pushing transactions to our FSTI Connector will enable your data to flow cleanly into Fourth Shift ERP.

Speed & Flexibility

The inControl system is built on web technologies. Using responsive design allows the exact same software to work on Desktops, Tablets, phones, and handheld scanners. Create a workflow once and use it many places.

Get Results!

The data collected from your floor needs to be delivered in a quick and efficient fashion. With inControl you will have the speed and flexibility to ramp up data collection projects and implement custom workflows with ease.

inControl

Capture data when and where you need it with scanners, computers, and tablets.
