

## Integrate with Shippers

We make it possible!

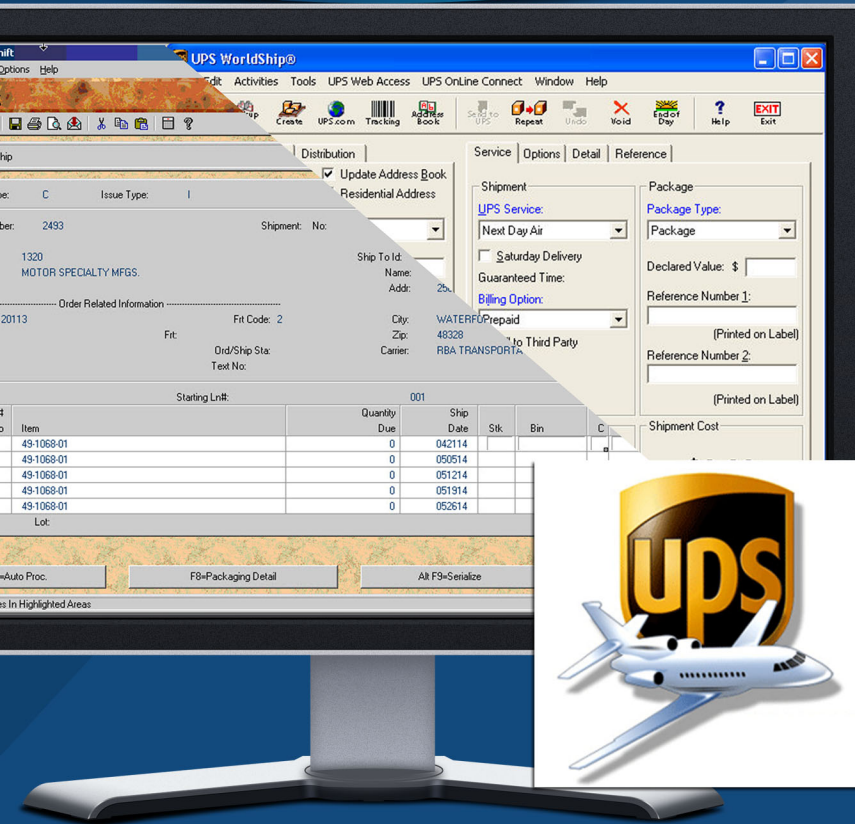

Integrating with your shipping partners can be a challenge when your developers have to know VB, Fourth Shift, and the shipping partner software. We have developed a system that works with your existing Fourth Shift system and multiple shipping partners - saving you money, time, and stress.

### Speed & Flexibility

Connecting to the Fourth Shift system will take many days if not weeks to develop a solid tested import to your shipping partners software. Not to mention the time required to export the data back into Fourth Shift. Our solution uses tested maps that speed the implementation and create specific tracking tables that can be used in SSRS reports to track effectiveness.

### Get Results!

At the end of the day, you want your orders to be shipped, your customers to be notified when that happens, and your ERP to be updated with the right data at the right time. Our solution will provide all that and more.
