

## Easily Manage Your Entire Business

We Make It Possible!

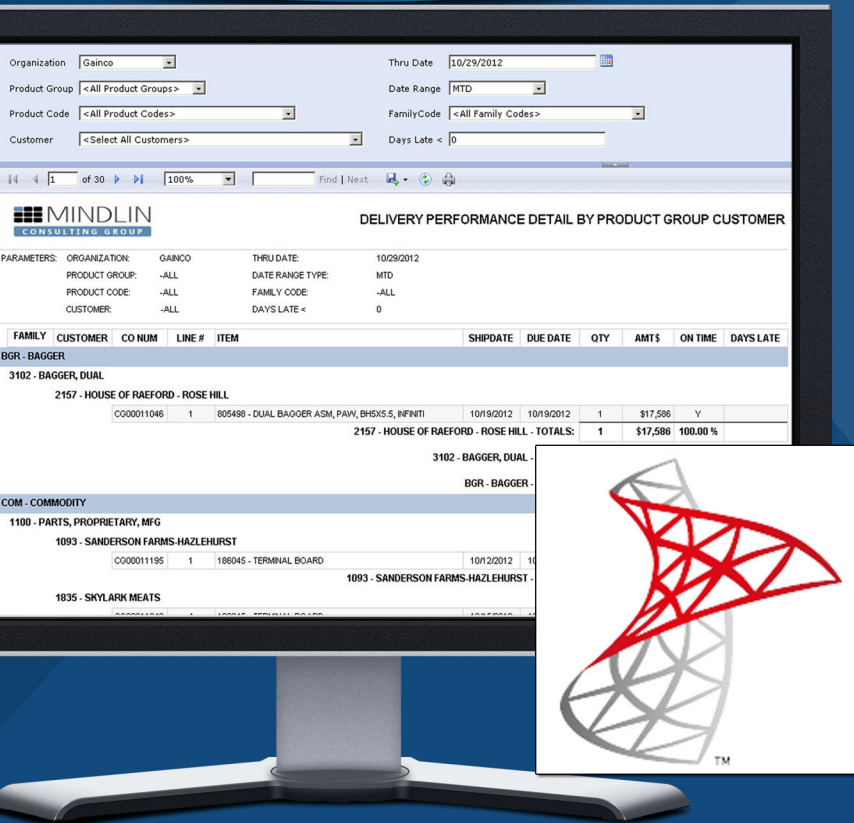

Built on Microsoft BI technologies, inPerspective Reports leverage the power of data warehousing/mining to deliver consistent results across all reports with optimal performance.

### Speed & Flexibility

Reports are designed as logical top down modules - top level summaries / graphs that drill down into mid level summaries which in turn drill down into operational details that allow you to quickly identify problem areas and then drill down into those areas to the detail that explains it.

### Get Results!

As inPerspective Reports leverage Microsoft SSRS technology, reports may be printed, exported to PDF, Excel, Word, HTML, or delivered via email subscription to an individual or distribution list or saved to a network or web share to keep your intranet updated.

# inPerspective

Reports that deliver relevant and accurate information you need to manage your business!
